

# Water Works

Collision Shop owners have traditionally made the change to lower VOC products only as required by local regulation, but now, even shops in unregulated areas are making the change to AWX® Waterborne Basecoat from Sherwin-Williams Automotive Finishes simply because of the great performance demonstrated by this world-class product.

An innovative waterborne basecoat/clearcoat system, AWX utilizes a proprietary resin system that behaves like the solvent borne systems of today. So that means minimal training and start-up costs.

To eliminate any anxiety surrounding conversion to waterborne, Sherwin-Williams does a comprehensive facility assessment and eliminates issues from the beginning. And then they stay on job with you, until everything is just right.

AWX provides terrific application, coverage and color and the entire switch to waterborne is seamless and smooth.

*“ In this business it’s important to do what’s right – with your customers, your employees and the environment. Switching to the AWX waterborne system and working with Sherwin-Williams was fantastic. They were on-site throughout the process and continue to provide us with great service and a great product. ”*

— John R. Mock | Johnny Mock’s Auto Body  
Pittsburgh, PA

Switch to AWX - it's not just right for the environment - its right for your business. To do the right thing, call 1-800-798-5872.
