

DustFree™ #55 Booth Dust Containment System

PRODUCT DESCRIPTION:

DustFree is a petroleum solvent based sprayable coating formulated to collect and to contain overspray commonly found in the paint booth. When applied to booth or shop floors, DustFree keeps dust on floors and off painted surfaces for cleaner paint work. After painting four cars, simply sweep up the dust and overspray then re-apply DustFree. With DustFree there's no need to wash booths with water; eliminating unwanted humidity, wet slippery floors and rust damage to booth walls. DustFree also reduces overspray build-up on floors and gratings.

COVERAGE:

One gallon will cover 2,000 square feet (0.8 wet mils). The average booth floor is about 250 square feet. One gallon provides eight applications.

APPLICATION:

- Step 1.** Thoroughly clean area to be treated making sure that floor is dry before applying DustFree.
- Step 2.** Apply DustFree with a spray system fitted with solvent resistant viton seals like the A50100SW ProPump Hand Sprayer. Use sparingly. Apply just enough to wet the floor. Over spraying will result in slippery floors.
- Step 3.** After 4 spray cycles use a broom to sweep up dust and dirt. Then reapply DustFree.

NOTE: Use DustFree (#55) and BoothGUARD(#50) to prolong booth life and to ensure quality paint work.
